

Cataract Surgery with Glaucoma

Managing two conditions during one procedure

When you have both cataracts and glaucoma, cataract surgery becomes more than just replacing a cloudy lens. It requires careful coordination of two conditions that affect different parts of your eye. **With proper planning and expertise, cataract surgery can be safe and even beneficial for patients with glaucoma.**

Why Glaucoma Makes This Different

1 Elevated Eye Pressure Risks

Surgery can temporarily raise intraocular pressure, which must be carefully managed to protect the optic nerve.

2 Drainage Considerations

The eye's drainage system may already be compromised, affecting surgical planning and lens choices.

3 Medication Interactions

Glaucoma medications may need adjustment before and after surgery to maintain stable pressure control.

4 Delicate Structures

Eyes with advanced glaucoma may have thinner or more fragile tissues requiring extra surgical care.

How I Manage Glaucoma Eyes

✓ Pressure-Lowering Strategies

Pre-operative planning includes pressure control measures before, during, and after surgery.

✓ MIGS Options

Minimally invasive glaucoma surgery can be combined with cataract surgery to improve drainage.

✓ Careful Medication Management

Your glaucoma drops are reviewed and adjusted to optimize pressure through recovery.

✓ Monitoring Plan

More frequent follow-up visits ensure pressure stays controlled as the eye heals.

✓ Coordinated Care

When needed, I work closely with your glaucoma specialist to ensure seamless management.

What You Should Expect

Cataract surgery is generally safe for patients with glaucoma. In fact, it often helps lower eye pressure naturally by improving fluid drainage. Your recovery may involve more careful monitoring and a slightly adjusted medication schedule, but most patients achieve excellent visual results while maintaining good glaucoma control.

Importance of Coordinated Care

Managing both cataracts and glaucoma requires understanding how the two conditions interact. An experienced surgeon who evaluates your glaucoma status thoroughly will create a surgical plan that protects your vision on both fronts.

Questions to Bring to Your Consultation

- How will you manage my eye pressure during and after surgery?
- Will my glaucoma medications need to change after surgery?
- How often will I need follow-up visits to monitor pressure?
- Should I consider combining cataract surgery with a MIGS procedure?
- What type of lens implant is best for someone with glaucoma?
- Do you coordinate care with glaucoma specialists when needed?

Ready to Discuss Your Options?

Managing cataracts and glaucoma together requires careful planning. Let's create a strategy tailored to your eye.
